Firebird IFS Basis Rackserver jetzt auch mit Windows Server Betriebssystem

The newest generation of our Firebird IFS Rack Server 2020 can now be ordered as a basic version with Microsoft Windows 2019.

We offer the server as follows:

Firebird IFS2020MW with 500GB SSD storage space for databases and backups at a price of EUR 2,490* in a 1.5U rack case.

The price includes a Firebird optimized Windows 2019 Essentials operating system installation. The server is designed for a maximum of 25 users.

Please note that no CAL licenses are required to use the Windows 2019 Essentials version. However, there are special license conditions which need to be considered.

If you want to access the server with more than 25 users, a Windows 2019 standard version is required as well as CAL licenses, which we can also provide for an additional charge.

The hardware offered here is not designed for access by more than 50 users. In this case, please request a customized quotation by e-mail to sales@ibexpert.biz.

This server reliably achieves IBExpert benchmark values above 250% with the current Firebird 64-bit Windows version and has proven to be extremely fast and reliable with our pre-installed configuration.

Important: This server is configured pre-installed by us exclusively for use as a high-speed Firebird server.

You have full access to all Firebird directories and database paths, but cannot install any other software on this server for performance and security reasons.

After the transfer has been carried out together with you by remote maintenance and the Firebird databases have been set up, we will also set up a backup/restore for you, so that your data backups are reliably performed daily.

The data backups are additionally secured on any other drive in the network or in the cloud.
Do you require more than 500GB space for your databases and backups? Then please request an individual offer from us: sales@ibexpert.biz.

**Hardware maintenance and remote DBA**

The remote DBA is a database administrator who remotely accesses the database systems to carry out their work.

This offers the advantages of geographical and temporal independence for database maintenance. This service enables mapping of almost all database-relevant activities in physical and virtual environments, monitoring, database operation and direct troubleshooting.

The hardware maintenance contract and remote DBA for the IFS2020MW server can be purchased for 2 or 4 years.

- Maintenance contract and remote DBA for 2 years: EUR 599.00
- Maintenance contract and remote DBA for 4 years: EUR 999.00

The maintenance contract is required when ordering the basic setup of your IFS server for optimal performance.

Offer subject to change without notice.
Delivery dates on request, payment in advance.
The specified delivery dates are always non-binding.

The statutory warranty period for our equipment is according to §438 BGB (German Civil Code) 24 months as a bring-in service.
In case of an error that cannot be corrected by a restart, we first verify by remote maintenance whether a hardware error has occurred.
If the defect is not covered by legal warranty, then the repair will be carried out for a fee, and the repaired server will be returned to you.
All costs are to be borne by the customer. During this period, you are not entitled to an exchange or replacement server.

*All prices excl. sales tax/VAT where applicable. Transport costs depend upon delivery location.*
