

## Firebird IFS Basic Rackserver with Linux Server operating system

The newest generation of our Firebird IFS Rack Servers can now also be ordered as a basic version with Linux operating system.

We offer the server as follows:

Firebird IFSML with 500GB SSD storage space for databases and backups for EUR 2,299\* in a 1.5U rack case.

Our IFSLR rack servers offer a significantly higher performance. Please request a written offer for this server by e-mail: [sales@ibexpert.biz](mailto:sales@ibexpert.biz).

The IFSML reliably achieves values between 230% and 400% in the IBExpert benchmark with the current Firebird 64-bit Linux version, and has proven to be extremely fast and reliable in our pre-installed configuration.

Benchmark results using Firebird 3.0 on an IFSML Server

Important: The IFSML is configured to be used exclusively as a fast Firebird server.

You have full access to all Firebird directories and database paths, but cannot install any other software on this server for performance and security reasons.

After the transfer has been carried out together with you by remote maintenance and the Firebird databases have been set up, we will also set up a backup/restore for you, so that your data backups are reliably performed daily. The data backups are additionally secured on any other drive in the network or in the cloud.

Do you require more than 500GB space for your databases and backups? Then please request an individual offer from us: [sales@ibexpert.biz](mailto:sales@ibexpert.biz).

## Hardware maintenance and RemoteDBA

The RemoteDBA is a database administrator who remotely accesses the database systems to carry out their work.

This offers the advantages of geographical and temporal independence for database maintenance. This service enables mapping of almost all database-relevant activities in physical and virtual environments, monitoring, database operation and direct troubleshooting.

The hardware maintenance contract and RemoteDBA for the IFSML server can be purchased for 2 or 4 years.

- Maintenance contract and RemoteDBA for 2 years: EUR 599.00
- Maintenance contract and RemoteDBA for 4 years: EUR 999.00

The maintenance contract is required when ordering the basic setup of your IFS server for optimal performance.

Offer subject to change without notice.

Delivery dates on request, payment in advance.

The specified delivery dates are always non-binding.

The statutory warranty period for our equipment is according to §438 BGB (German Civil Code) 24 months as a bring-in service. In case of an error that cannot be corrected by a restart, we first verify by remote maintenance whether a hardware error has occurred. If the defect is not covered by legal warranty, then the repair will be carried out for a fee, and the repaired server will be returned to you. All costs are to be borne by the customer. During this period, you are not entitled to an exchange or replacement server.

*\* All prices excl. sales tax/VAT where applicable. Transport costs depend upon delivery location.*
